

Megaport to Become a Provider for AWS Interconnect

Implementing the specification for AWS *Interconnect – last mile* will enable even more options for customers to deploy private, on-demand connectivity with simplified network automation.

Brisbane, Australia – 19 December 2025 – Megaport Limited (ASX: MP1) (“Megaport”), the global leading Network as a Service (NaaS) provider, announced today it plans to become a provider of AWS *Interconnect – last mile*, a new service from Amazon Web Services (AWS) designed to simplify how customers privately connect their cloud environments.

As a leading NaaS connectivity partner and part of the AWS Partner Network (APN), Megaport sees this offering as an important evolution in cloud networking and a strong sign of where the industry is heading.

AWS *Interconnect* expands the options available to customers that build distributed architectures, offering new ways to create private, high-performance connectivity between key parts of their infrastructure. The *last mile* solution is a fully managed service that streamlines on-premises connectivity to AWS in just a few clicks. By automating AWS network configuration and enforcing resiliency, it reduces operational complexity for customers, allowing them to focus on their applications.

According to the [Megaport Cloud Network Report 2025](#), 62% of IT leaders prioritize designing networks that span clouds, regions, and data centers with increasing frequency.

“AWS *Interconnect – last mile* gives customers more choice in how they connect their cloud environments, which is what we’re all about at Megaport,” said Matt Simpson, Executive Vice President at Megaport. “I helped build Megaport’s first cloud connections ten years ago, including our very first connections to AWS, so it’s exciting to work alongside them in this next phase of their evolution.”

With 1,000+ data centers and 300+ cloud on-ramps worldwide, automated provisioning, built-in redundancy, and direct connectivity to 410+ cloud and service providers, Megaport’s vendor-neutral fabric helps customers take full advantage of AWS *Interconnect – last mile* across their global footprint. Megaport is excited to implement the specification for AWS *Interconnect – last mile*, supporting customers as they build scalable, performance-driven multicloud and hybrid cloud architectures.
