

Activate in 60 seconds. Stay protected, always.

Protect your network from volumetric, traffic-based, and application-layer attacks with a single click. No complexity, no surprise costs. Fast, reliable protection when you need it most.

Overview

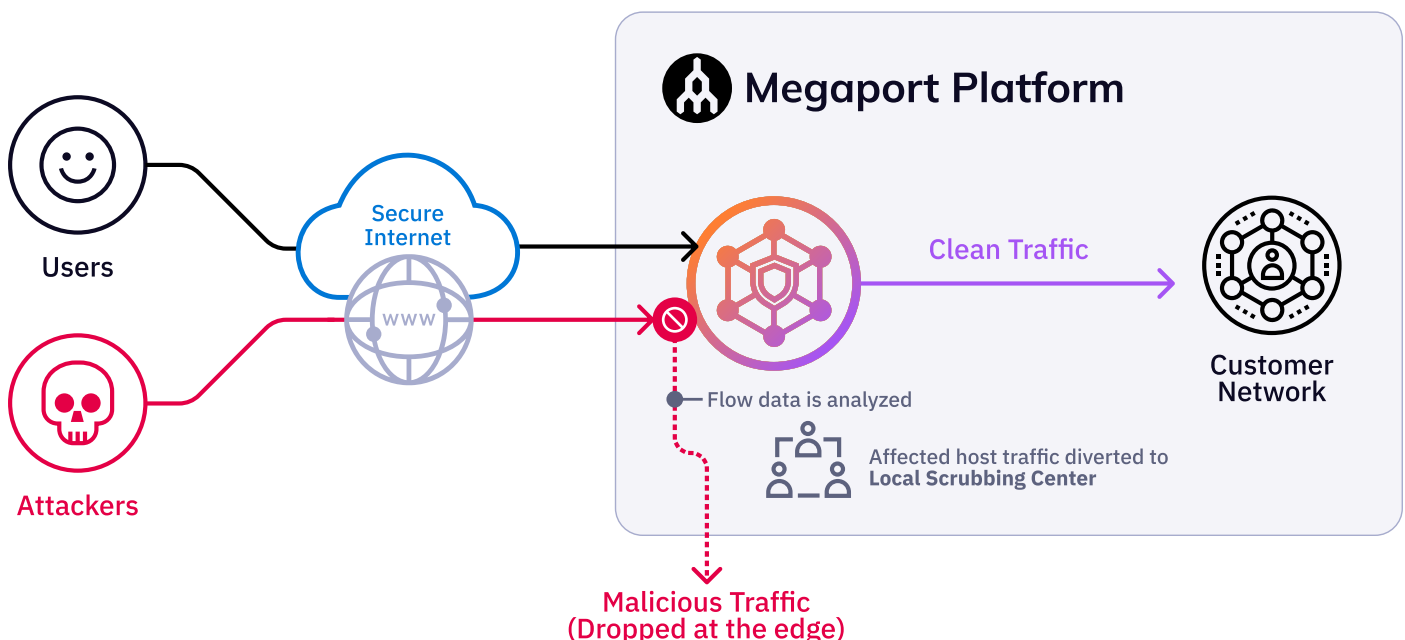

Megaport DDoS Protection is an add-on service for Megaport Internet, delivering high-performance attack detection and mitigation through Megaport's global Network-as-a-Service (NaaS) platform.

Built on Megaport's high-capacity backbone and IP edge, the service ensures your applications, services, and customers remain online, even during large-scale or unexpected attacks.

Available across all Megaport Internet-enabled locations, the service integrates seamlessly into your existing connectivity.

How it works

- Deploy via Megaport portal with any Megaport access product: Port, MCR, or MVE
- Instantly toggle between monitoring and protection modes
- Adjust sensitivity thresholds to align with your traffic profile
- Traffic is only scrubbed when an attack is detected
- Mitigation is applied only to targeted hosts, minimizing impact

Global Coverage

Megaport DDoS Protection is available in all Megaport Internet-enabled metros worldwide, supported by geographically distributed scrubbing centers.

North America

- Ashburn
- Atlanta
- Bay Area
- Boston
- Charlotte
