

Cross-Cloud

Cloud-to-cloud workloads. Turbocharged.

Spin up a virtual router to handle traffic between two or more clouds at the edge.

CONTENTS

BENEFITS	03
HOW IT WORKS.....	04
MORE INFORMATION	05

Design a cloud-to-cloud network without complexity.

BENEFITS

Rapid

Minimize latency between front-end and back-end workloads on different platforms, on demand.

Scalable

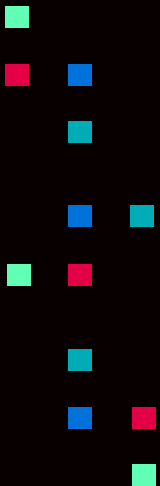

Replicate resources across cloud platforms to scale without delays

Consolidated

Deploy across separate infrastructure and maintain a full view of the user experience.

Simplified

Migrate data between clouds without hairpinning traffic at a physical location or dealing with public internet limitations.

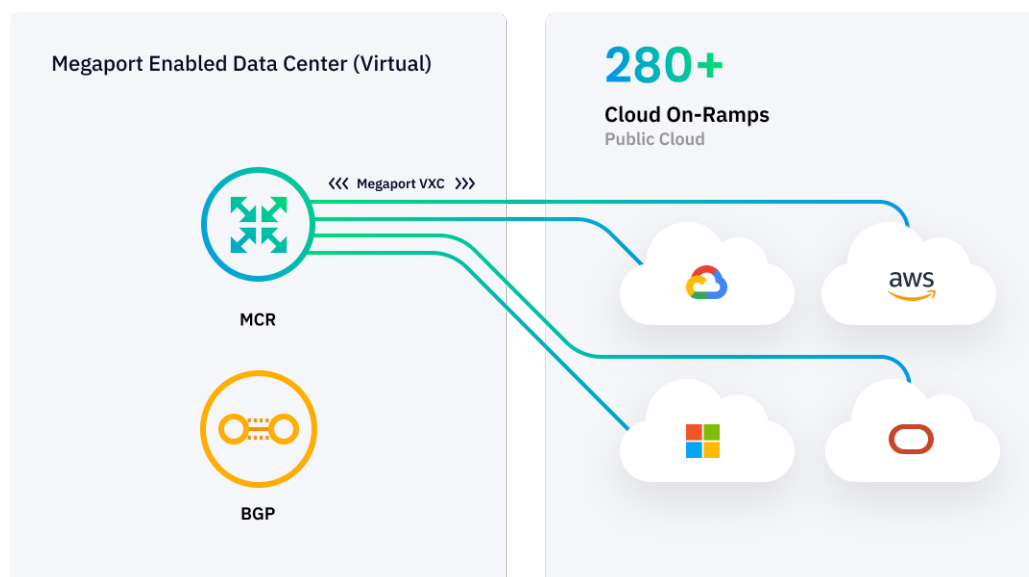

HOW IT WORKS

When one cloud connection just isn't enough.

Spin up connections between hundreds of the world's leading service providers, and manage it all in one simple portal.

Megaport Cloud Router

Managed routing platform for easy public or private connectivity at Layer 3.

Cross Connect

Physical connection from the customer to Megaport.

Virtual Cross Connect (VXC)

A private Layer 2 connection to any service provider in the Megaport ecosystem.

Cloud on-ramps

Physical entry points to the cloud, available globally.

We'll fit seamlessly into your network architecture.

Spin up a virtual router to handle traffic between two or more clouds at the edge. Consolidate your split stack, reduce hops, and get full network visibility.

Complex Networks, Simplified.

Deploy global private connectivity in minutes.

Megaport is the leading provider of Network as a Service (NaaS) solutions. Our global Software Defined Network (SDN) helps businesses rapidly connect their network to services on demand via our easy-to-use portal or open API.

Megaport makes network connectivity easy and agile compared to traditional networking solutions. Our global ecosystem includes the world's top cloud service providers, data center operators, systems integrators, and managed service providers.

One platform for every connection.
