

Megaport Cloud Router

Megaport Cloud Router (MCR) changes cloud networking as you know it.

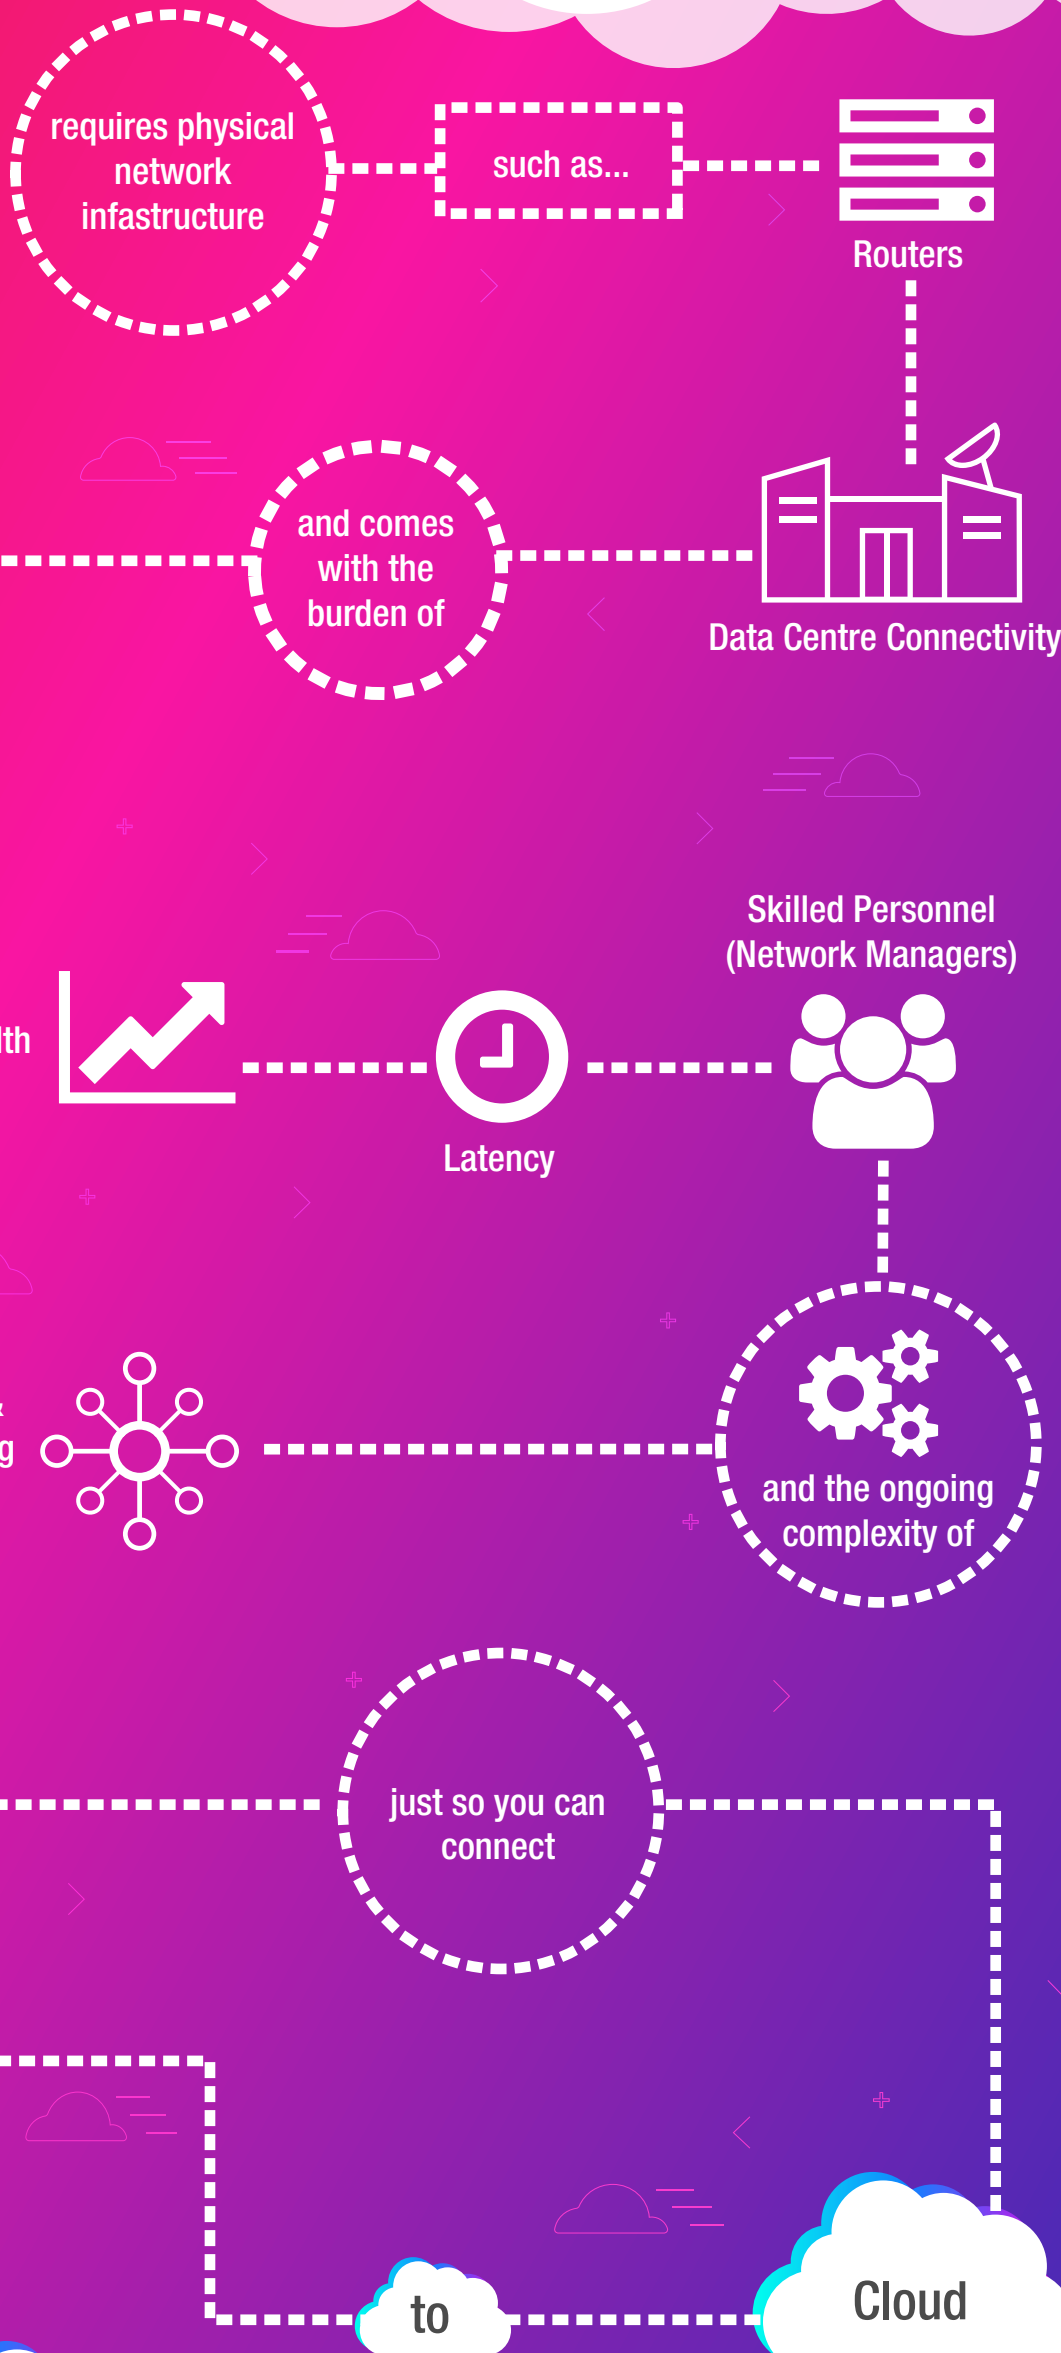

Until recently, private cloud connectivity was out of reach for many. Now, anyone can access seamless cloud interconnectivity to build optimised hybrid cloud, multicloud, and multi-region networks.

Traditional Cloud to Cloud Connectivity...

MCR Cloud to Cloud Connectivity...

MCR enables on-demand private connectivity to the world's leading Cloud Service Providers, between any regions, without the need for physical infrastructure.

Global Reach

Leverage the global reach of Megaport's purpose-built private network and access leading Cloud Service Providers across a wide variety of availability zones and regions.

Easy Design and Provisioning

Quickly design and provision a private network between public Cloud Service Providers and SaaS providers in the Megaport Ecosystem.

Reduced Ownership Costs

Nearly eliminate cost of ownership associated with building a physical network through scalable pay-as-you-need connectivity.

Private Cloud Interconnection

Take advantage of innovative private cloud interconnection technologies without the complexities of having to build a physical network.

Better Performance

Less Complexity

Business Agility

Improved Security

Lower Network Costs
